

SAM versus Funções

(Como Gostaríamos que Fosse)

```
typealias Action<T> = T.() → Unit
```

```
/**
 * Base class for Kotlin build scripts.
 */
@ScriptTemplateDefinition(
    resolver = KotlinBuildScriptDependenciesResolver::class,
    scriptFilePattern = ".*\\.gradle\\.kts")
@SamWithReceiverAnnotations("org.gradle.api.HasImplicitReceiver")
@GradleDsl
abstract class KotlinBuildScript(project: Project) : Project by project
```
